

## Acceptance Criteria

Product Name: **Bite**

Team Name: **Munchies**

**Our definition:** The process of acceptance criteria is split into five major steps:

1. Push your completed work for the task.
2. Notify your co-members that the task is complete so they can update their repositories
3. If the code has flaws or doesn't pass any case, team members should peer review or modify it to meet coding standards.
  - Team members can also inform the task owner to modify work.
  - If work meets coding standards, skip to step 4.
4. Indicate that the task (or user story) is complete
